

THE STICKY PROBLEM ENDS HERE!

How Suntex and Blue Reef are Transforming the Pulp and Paper Industry

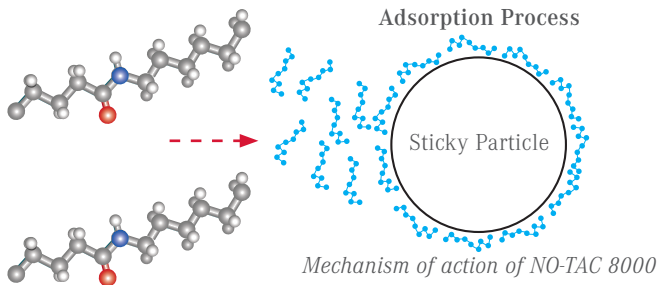

– PULP + PAPER –

The global pulp and paper industry is under pressure. As mills around the world accelerate their shift toward recycled fibre in pursuit of ambitious cost reduction and sustainability goals, a hidden enemy is quietly costing them millions — Stickies! Even Talc-free virgin fibre results in Pitch issues globally.

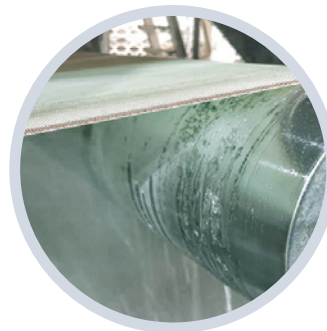

– NO-TAC 8000 –

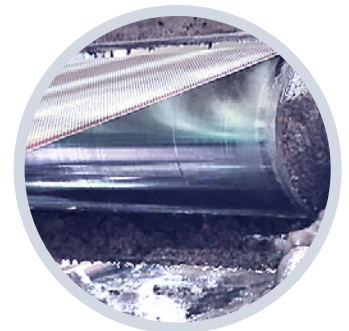

Engineered specifically to meet the stickies and pitch challenge, Suntex's NO-TAC 8000 is a cutting-edge synthetic polymer solution designed to neutralize tacky contaminants at their source. Rather than managing the symptoms, NO-TAC targets the problem directly — preventing stickies and pitch from depositing on critical machine components in the first place.

– SUCCESS STORY –

As recycled fibre volumes continue to climb, so too does the impact of Stickies on mill efficiency and profitability. Compounding the problem is the global reduction in talc usage. Without it, mills are seeing a rise in pitch-related issues. Suntex is set out to change that in South Africa! **The results speak for themselves!** Mills across the globe that have implemented NO-TAC 8000 Technology are reporting significantly reduced downtime, improved operational efficiency, and a marked improvement in the quality of their finished product. The solution has earned the confidence of mill operators worldwide, backed by a growing base of satisfied customers who have seen measurable, real-world results. In an industry where every hour of downtime and every ton of lost yield carries real financial consequences, Suntex's Anti-Tac Technology isn't just a chemical solution — **it's a competitive advantage!**
